

About the Aqua-Air™ 3 liner...

The idea behind the **Aqua-Air™ 3** liner was to have a higher quality, longer lasting, planter liner made from all natural materials that could do more than the standard coco-fiber liners sold today.

After a year long search, we finally found an innovative supplier that holds a patent on the manufacturing process of the Aqua-Air™ liner. In addition, they were willing to increase the quality and improve the design in order to meet our specification.

The best part of the Aqua-Air™ 3 liner is what it does for your plants and you!

First, because of its inner layer construction it will hold up to a half gallon of water in the lower third of the liner. If you accidentally over-water your plants, the excess water simply flows thru the sides above the inner layer.

Next, we named it the **Aqua-Air™ 3** liner for a reason, the inner layer film will hold water but it is not an oxygen barrier. That means it helps create a healthy, “breathable” growing environment for your plant’s roots.

Finally, a typical standard fiber liner lasts only one to two years, but you’ll find the **Aqua-Air™ 3 liner lasts 3 years, we guarantee it!** So you’ll save time and money, not having to replace liners every year and use only half the water that you would normally use with a standard fiber liner. Conserving valuable water saves money!

The end result is a coir fiber liner that **saves money, saves water and helps grow beautiful healthy plants.**

That’s what Aqua-Air™ 3 liners are all about, a better value for you.

Manufactured exclusively for and distributed by:

i3 Planters™
